SUMMARY

IT student, researcher, and developer with direct hands-on experience in enterprise software development and technical writing at the Department of Science and Technology (DOST). Skilled in conducting technical research, analyzing operational pain points, and prototyping innovative digital solutions alongside maintaining PostgreSQL databases and microservices architectures. Adept at authoring clear research and system manuals, preparing administrative reports, and maintaining organized digital records with high attention to confidentiality, integrity, and cross-team collaboration.

SKILLS & COMPETENCIES

Core Competencies: Technical & Applied Research, Innovative Problem-Solving, Time Management, Leadership & Initiative, Verbal & Written Communication, Team Collaboration, Organization & Multitasking
Administrative & Secretariat: Technical Writing, System Documentation, Preparation of Reports & Minutes, Digital Records Management & Filing, Property & Inventory Tracking Support, Document Tracking, Inter-office Coordination, Data Confidentiality, Discretion & High Integrity
Office & Productivity Tools: Microsoft Office (Word, Excel, PowerPoint), Google Workspace, Document Version Control, Project Tracking Tools
Programming & Scripting: JavaScript (ES6+), TypeScript, SQL, Python, HTML5, CSS3
Backend & Architecture: Node.js, Express.js, Microservices Architecture, RESTful APIs, Database Migrations
Frontend & Frameworks: React.js, Next.js, Modern UI/UX Component Design
Databases & DevOps: PostgreSQL, pgAdmin, Docker, Docker Compose, Git, GitHub, Postman, Supabase
Methodologies & Other: Applied Research & Solution Prototyping, IT Technical Writing, System Manuals, AI-Assisted Development & Debugging, Process Automation

WORK EXPERIENCE

Department of Science and Technology (DOST) **2026**
Software Developer & Technical Writer (OJT)

- Conducted research and investigative analysis on system performance bottlenecks to recommend and implement innovative architectural solutions.
- Authored comprehensive technical documentation, system manuals, API specifications, and standard operating procedures to streamline cross-team communication and ensure accurate record-keeping.
- Provided operational and technical support across internal workflows, auditing digital logs, assisting teams in meeting administrative milestones, and documenting project progress.
- Developed, maintained, and debugged backend services in a distributed Microservices ecosystem, ensuring reliable inter-service communication and system uptime.
- Executed database schema migrations, automated data cleanup scripts, and managed relational schemas, asset data verification, and query performance with PostgreSQL and Node.js.
- Containerized backend services and PostgreSQL instances using Docker & Docker Compose for seamless multi-service local testing.

RELEVANT PROJECTS

DOST GOVCHAT – Secure Government Communication Platform **Full-Stack Developer & Researcher**
Stack: React, Node.js, Express, PostgreSQL, Docker, REST APIs, pgAdmin

- Researched and integrated modern encryption and authorization workflows to deliver an innovative, secure agency communication platform.
- Built the complete full-stack web application connecting the React frontend with the dedicated DX_GovChat_Backend microservice.
- Engineered secure user authentication, role-based authorization, and real-time chat/notification functionality for agency communication while strictly enforcing data privacy and security.
- Designed automated database migration pipelines, seeding logic, and database cleanup scripts in PostgreSQL.

DOST Enterprise Information System (EIS) – Microservices Suite **Backend & Debugging Engineer**
Stack: Node.js, Express, PostgreSQL, Microservices (Auth, Geo-Data, User Profile, Strategic Planning)

- Researched data flow patterns to identify systemic bottlenecks and engineered innovative bug fixes for complex cross-service issues.
- Maintained and debugged multiple microservice backends (e.g., User Profile Management, Authorization, Strategic Planning, Geo-Data, FileService).
- Diagnosed and resolved critical system bugs, including cross-origin (CORS) issues, route conflict bottlenecks, and query sorting/filtering algorithms.
- Implemented new backend features and data manipulation endpoints for organizational management and project portfolio tracking.

EDUCATION

South East Asian Institute of Technology Inc. **2023 – Present**
Bachelor of Science in Information Technology (Undergraduate)

ADDITIONAL INFORMATION

Languages: English (Conversational), Filipino (Native), Cebuano, Hiligaynon
Key Strengths: Rapid learner, high data accuracy, multitasking ability
Availability: Flexible schedule; open to weekday, weekend, and holiday shifts
